

## Tell us what your idea is.

---

*Idea is to help and enable blind people to cross or walk on any road. Currently blind people are finding sometimes difficult to cross the road in countries like India where there is a lot of traffic. The app will enable the blind people to respond what is the current time to cross the road. Apart from this, the app will also enable them to walk on any road while just holding the phone in hand without any help.*

## Tell us how you plan on bringing it to life.

---

*Describe where your project is, how you could use Google's help in the endeavor, and how you plan on using On-Device ML technology to bring the concept to life. The best submissions have a great idea combined with a concrete path of where you plan on going, which should include:*

- *(1) any potential sample code you've already written, - Still to develop*
- *(2) a list of the ways you could use Google's help, - We will use camera feature of the phone which will use AI to detect the object which is on the way for blind people based on distance the app will respond*
- *(3) as well as the timeline on how you plan on bringing it to life by May 1, 2020. - Lot of the things are already there in place we will just the api which is provided by google/ android.*

## Tell us about you.

---

*I am a mobile developer working with IOS and Android technologies. I do not have links to other projects as of now probably this will be my first.*

## Next steps.

---

- Be sure to include this cover letter in your GitHub repository

- Your GitHub repository should be tagged #AndroidDevChallenge
- Don't forget to include other items in your GitHub repository to help us evaluate your submission; you can include prior projects you've worked on, sample code you've already built for this project, or anything else you think could be helpful in evaluating your concept and your ability to build it
- **[The final step is to fill out this form to officially submit your proposal.](#)**
